(Contract: NASw-2035)

(NASA-TT-F-13364) Avail: NTIS CSCL 04B

A comparatively large number of television pictures of wave clouds associated with obstacles, taken by the Cosmos-122 satellite, are analyzed above mountainous regions in the Urals and eastern Siberia. The characteristic scale of wave movements is determined from the television pictures. Statistical analyses of rawinsonde data on temperature and wind are used as a basis for drawing conclusions regarding the nature of the temperature stratification within the cloud layer and the wind-field pattern in the air layer below the clouds. Graphs are provided which allow use of television pictures of wave clouds to determine the wind speed and direction.
